1. Claims 14-18, 21, and 30-32 remain for examination.

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 14-18, 21, and 30-32 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

"An instruction set architecture comprising a set of instructions" falls under the non-statutory subject matter. See MPEP 2106 (I)(B)(1)(a).

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 14-18, 21, and 30-32 are rejected under the judicially created doctrine of double patenting over claims 5-10 of U. S. Patent No. 6,772,319 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows:

All limitations of the present claims are recited in the claims in the cited patent.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ronen taught a method of using a fused instruction of two operations to be executed in a single clock cycle.

Gorshtein taught a method of using plural ALUs for dual operation execution.

Burchfiel et al taught a method of executing multiply-add instruction.

Garcia et al taught a method of using a floating point ALU executing add-multiply compound instruction.

Kohn taught a method of executing dual operation instruction
